

NETSUITE MANUFACTURING EDITION FEATURES COMPARISON CHART

NetSuite offers three incremental ways to deploy manufacturing functionality to closely match the way companies manufacture products. With NetSuite, businesses with different manufacturing locations can make the same item in a different way at each location.

This data sheet helps manufacturing companies determine which version of NetSuite Manufacturing is right for them.

Work Orders & Assemblies works best for companies who do some light assembly but do not need to track work in process or the labor separately.

WIP & Routings adds the ability to define work centers, routings, track labor costing and infinite capacity scheduling. It also provides a Gantt chart with drag-and-drop functionality.

Advanced Manufacturing is ideal for those looking for complete control over all aspects of their manufacturing processes, including finite capacity scheduling, quality management and manufacturing execution.

	Work Orders & Assemblies	WIP & Routings	Advanced Manufacturing
Work Orders	●	●	●
Assembly Builds (Work Order-less Manufacturing)	●	●	●
Back-Flushing	●	●	●
Work Center Management		●	●
Routing Definition & Labor Costing		●	●
WIP Tracking		●	●
Infinite Capacity Scheduling		●	●
